

XXV CIM Colloquio di Informatica Musicale

L'Aquila | October 13-16, 2026

APPLICATION FORM FOR THE SELECTION OF WORKS (music and sound art)

Opera					
Category	Electroacoustic composition on fixed media				
Title	Gamma				
Subtitle					
Year	2026				
Authors	Giulio Romano De Mattia				
Expected duration	00:07:44	Minimum duration		Maximum duration	
Performers	Giulio Romano De Mattia – sound direction				
Repository URL(s)	Audio (WAV 48 kHz / 24-bit, stereo): https://drive.google.com/file/d/1DFaRORUAwgChErPTUqlikodj9wXkLdaB/view?usp=sharing Source code: https://github.com/DMGiulioRomano/GAMMA (tag: cim2026-submission)				

Work presentation (max 2000 characters)

Gamma (7'44", stereo fixed media) is generated by a YAML-to-Csound pipeline. The score is a field of tendency masks: for each parameter, a range sampled stochastically per event.

One integer per event, the rhythmic value, drives four dimensions of the synthesis. In time it subdivides a reference duration into intervals of duration/n: high values pack events, low values thin them. In pitch it offsets the reading index into a tuning table, walking the event into a dense microtonal cloud. In space it divides the stereo circle: the event sweeps an arc of $2\pi/n$ radians in the Mid/Side plane, one nth of a full rotation, a spatial harmonic. In amplitude it acts through pitch.

The rhythmic stream generates itself: each value is a function of the previous one, a discrete dynamical system whose orbit becomes the music. From a short seed it unfolds through a non-linear feedback map, a logistic map at its core in the chaotic regime. I set the seed and the regime; the values follow.

Pitch lives in a Pythagorean tuning of 200 intervals per octave, pure fifths stacked and reduced to the octave, after Walter Branchi. The chain of fifths never closes, so neighbouring pitches fall a few hertz apart, and when two voices land on adjacent degrees, beating zones open on their own.

Loudness is treated as perception: a dynamic specifies a level in Phon. Through the ISO 226:2003 equal-loudness contours it computes the amplitude each frequency needs for that level, so high and low pitches at the same marking sound equally loud.

Each layer holds a musical state: static, or in transition between an initial and a final mask across its lifespan. The work moves through six sections: the slow birth of clusters, a glissando solo, clouds thickening into a swarm, a rupture, one massive cluster, a closing ultra-glissando.

The working time is deferred: specify, render offline, listen, rewrite. That deferral is deliberate: I judge the orbit of the system, then rewrite the rules that produce it.

Program notes (max 1000 characters)

Gamma is where the *Delta* cycle begins. *Delta* is the river's mouth: tributaries, sediment, accumulation. *Gamma*, its spring.

The piece dwells in musical states of transition.

Rhythmic figures weave a moving texture; timbres emerge from it, thin, and disperse, stretching across time until they unfold as space.

All that *Delta* gathers, *Gamma* reduces to a first gesture: a cry becoming sound, and sound becoming space.

For *Intero* and *Lontano*

Authors' biographies (max 500 characters)

Giulio Romano De Mattia (Rome, 2000) is an electroacoustic music composer working on feedback systems and algorithmic composition, with a particular focus on the meaning of fixed media today. He holds a Bachelor's degree in Electronic Music from the Conservatory of Santa Cecilia in Rome, where he studied with Nicola Bernardini, and is currently pursuing a Master's degree in Electronic Music at the Conservatory of L'Aquila with Agostino Di Scipio.

Performers' biographies (max 500 characters)**Technical rider** (max 1000 characters)

Gamma is a native stereo (L/R) fixed-media work. Standard stereo playback is the reference format and fully sufficient. Multichannel diffusion is welcome where conditions allow (the work is Mid-Side encoded, so its spatial information spans the full horizontal 360° rather than only the frontal image of discrete L/R stereo; on periphonic systems such as quadraphonic or octophonic, a suitable decoding can be provided on request — though it is not essential), but not required. No specific mixer or equipment requirements.

INSTRUCTIONS FOR COMPLETION OF THE APPLICATION FORM

For each submitted artistic proposal, it is mandatory to provide the *Application form for the selection of works (music and sound art)*, completed according to the instructions provided below. The description of the requested information indicates the required fields, unless otherwise specified.

Category

One of the following categories specified in the *Call for Works (music and sound art)*

- A. Electroacoustic composition on fixed media
- B. Composition with instruments (or voice) and fixed media
- C. Composition with live electronics, with or without instruments
- D. Interactive mixed-media performance and live coding
- E. Audiovisual composition
- F. Multimedia installation

Title

Full title of the work as it should appear in programs and promotional materials.

Sottotitolo

Full subtitle (if applicable) as it should appear in programs and promotional materials.

Year

the year in which the work was composed.

Authors

First and last name of all authors, separated by commas.

Duration

Expected performance duration in HH:MM:SS format. If the duration is variable, specify the minimum and maximum acceptable duration.

Performers

First and last name of all performers identified by the authors, separated by commas.

Repository URL

The URL(s) of the repository for materials that cannot be uploaded via EasyChair, required for the evaluation of the work and its performance (scores, multimedia content, etc.).

Work Presentation

Summary of the work or performance, outlining its concept, structure, instruments, and any interpretative elements useful to the reviewers. The information will be used solely for the evaluation of the work and will not be published if selected. Maximum length: 2000 characters, including spaces.

Program Notes

Brief description of the work as it should appear in programs and promotional materials. Maximum length: 1000 characters, spaces included.

Authors' Biographies

First name, last name, place and year of birth, and biographical notes for each author of the work, in the form in which they should appear in programs and promotional materials. Maximum length: 500 characters, spaces included.

Performers' Biographies

First name, last name, role, and biographical notes related to the identified performers, in the form in which they should appear in programs and promotional materials. Maximum length: 500 characters, spaces included.

Technical Rider

Essential technical information for the performance or installation of the work, such as required instruments or equipment, audio/video formats, and other logistical requirements. Maximum length: 1000 characters, spaces included.
